Hi Joyce,

CDPHE agrees with your plans. Thanks for letting us know.

Thanks again,
Curt

Dear Curt and Dave – As you know, Stratus intends to complete the work at the Site, including excavating some hot spots remaining in the Phase 2a pit and the Phase 1 pit. The contractors said they never observed any trash in the Phase 2a area. In the Phase 1 area, they have not observed any trash or debris for some time. I think the remaining contaminated area requiring excavation in Phase 1 is from drum liquids that were either deliberately poured out by Neuhauser or migrated downward over time.

I believe it is acceptable for them to conduct these excavations without a CABI present. Obviously, if they found new layers of trash, they would have to stop work and procure a CABI again.

There is one final test pit that will have to be excavated at the end of the project in an area where the EM instrument detected an anomaly. That test pit will require a CABI.

I wanted to check with you before I give them the green light to conduct the excavations without a CABI. Let me know if you have any comments or concerns.

Thanks!

Joyce
